DETAILED ACTION

1. Applicant's after final amendments in the reply filed on September 4, 2009 have been acknowledged and entered. The reply included cancellation of claims 1, 2, 11, 12, 15, and 17 and amendments to claims 3, 4, 6, 8, 13, 14, 16, 34, 35.
2. Claims 3-10, 13, 14, 16, 34 and 35 are pending.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: The instant claims are directed to a method of treating a surface of a substrate by forming hydroxyl groups on an oxide surface by exposing the oxide surface to a plasma, reacting epoxy groups on epihalohydrin molecules with the surface hydroxyl groups *in situ* in the absence of plasma and in the absence of acid and base catalysts to provide a functional surface; and exposing the functionalized surface to vacuum *in situ* to provide epoxy-terminated, surface-bound spacer chains. Although the prior art reference Newsham (U.S. Patent No. 5,486,580, Jan. 23, 1996) teaches that hydroxyl or amine functional groups can be reacted with epihalohydrin containing epoxy functional groups in the presence or absence of a suitable catalyst or in the presence or absence of suitable solvent (column 8, lines 33-44) as set forth in the Final Office Action dated July 13, 2009, the last step for reacting epihalohydrin with hydroxyl groups in the conventional method would require a base catalyst to expose epoxy functional groups as discussed

during a telephone interview with Ms. Michelle Manning on August 14, 2009. Therefore, Newsham's teaching that that hydroxyl or amine functional groups can be reacted with epihalohydrin containing epoxy functional groups in the presence or absence of a suitable catalyst or in the presence or absence of suitable solvent applies to reaction between hydroxyl or amine functional groups and epihalohydrin, but a catalyst is need to expose epoxy functional groups following the reaction. In the claimed invention, the base catalyst is not needed as the reaction takes place in a vacuum, which removes HCL and forms epoxide ring to provide epoxy terminated-surface. Therefore, the prior art Newsham does not teach the claimed feature of reacting epoxy groups on epihalohydrin molecules with the surface hydroxyl groups *in situ* in the absence of plasma and in the absence of acid and base catalysts to provide a functional surface; and exposing the functionalized surface to vacuum *in situ* to provide epoxy-terminated, surface-bound spacer chains.

In view of the foregoing, all the prior art rejections set forth in the previous Office action dated July 13, 2009 have been withdrawn.

The provisional obviousness-type double patenting rejections are the only rejections remaining in the instant application. Therefore, the provisional obviousness-type double patenting rejections as set forth in the Office Action dated July 13, 2009 have been withdrawn in the instant application since the instant application, filed on March 24, 2004, has an earlier filing date as the copending U.S. Patent Application No. 11/609,045, filed on December 11, 2006. See MPEP §804 [R-5].

Claims 3-10, 13, 14, 16, 34, and 35 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to UNSU JUNG whose telephone number is (571)272-8506. The examiner can normally be reached on M-F: 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Shibuya can be reached on 571-272-0806. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
